SOFTWARE ENGINEER

SOVANNMONYREAK HING

PERSONAL PROFILE

Hello, world! When learning a programming language for the first time, programmers prefer to output. I am Sovannmonyreak Hing (nicknamed Rick), a 21–year–old Cambodian teenager who aspires to be a Googler because I believe in technology and its ability to enhance our daily lives. I am a Computer Science graduate student.

As an intern, I worked as a web developer and chatbot developer for Sousdey Cambodia (https://www.sousdeycambodia.com/). In addition to my professional experience, I have been working since my sophomore year. However, my internship lasts around six months and allows me to work with well–known firms like Smart, Cellcard, and Chip Mong. Even so, that hasn't stopped me from pursuing additional real–world job experiences, so I've set myself up as a freelancer in web and chat–bot programming. Aside from working and studying, I'm also developing a support system to assist the future generation of computer science students. These events include self–study assistance, coding, and a hackathon. Each of those exercises is code–related, but more importantly, it helps students learn the workflow of how to arrange their abilities with logic.
